Annotation: In this article, through the development of small business and private entrepreneurship, increasing the share of the population in the economic sectors, creating conditions for the activity of small business entities in the regions of the country, forming their reliable legal bases, increasing the efficiency of the activity of creating all the conditions for the transparency of business activity. provision, ideas and considerations about increasing the attractiveness of the investment activities expected to be attracted to the sector are presented.

Key words: Small business, entrepreneurship, population employment, economic growth, well-being.

From the initial stage of economic reforms in our country, special attention is paid to ensuring economic growth, creating new jobs, solving the employment problem, achieving a stable increase in the population's income, and improving living conditions. In the literature of the market economy of Western countries, "business is explained as a production system aimed at satisfying the needs and wants of society." Business covers the relations between all participants of the market economy and includes the behavior of not only businessmen, but also consumers, hired workers, government officials.

A number of positive changes have begun to take place in our country in terms of adapting all small businesses and entities operating in the country's economy to today's requirements and increasing their competitiveness. As mentioned earlier, small business entities are experiencing processes of specialization in certain regions and industries. According to the results of research conducted in our country, it is necessary to take into account the capabilities of the country's regions in the development of small business entities. The fact that our state is providing support is causing serious structural changes in the industry.

In our opinion, it is necessary to create conditions for the activity of small business entities in the regions of the country, to form reliable legal bases for them, to increase the efficiency of the activity of creating all the conditions, to ensure the transparency of business activities, and to increase the attractiveness of the investment activity that is expected to be involved in the field.

As a rule, regional factors of small business entities prevail in terms of influence on the investment attraction process. It is necessary to indicate the need to carry out the analysis of the

investment environment by sectors. Because positive investment factors have specific aspects for different sectors. In some cases, the factors that can play a positive role in one network are negative for another network, or if any indicator is sufficient for a certain network, this indicator itself may be completely insufficient for the successful development of another network.

Table 1

The share of small business entities in the economy of the Republic of Uzbekistan.

Indicators	2010	2015	2020	2021	2022	Change in 2022 compared to 2010, (+,-)
GDP	60,8	64,6	55,7	54,9	51,8	-9,0
Industry	26,6	40,6	27,9	27,0	25,9	-0,7
Construction	52,5	66,7	72,5	72,4	71,6	19,1
Employment	74,3	77,9	74,5	74,4	74,8	0,5
Export	13,7	27,0	20,5	22,3	29,5	15,8
Import	35,8	44,5	51,7	48,7	49,4	13,6

Source: author's development based on the information of the State Statistics Committee of the Republic of Uzbekistan

If we pay attention to the values of Table 1, it can be seen that the share of small business entities in the Republic of Uzbekistan in the country's gross domestic product and in the industrial sector will be 51.8 percent and 25.9 percent in 2022, respectively, and it has decreased by 9.0 percent and 0.7 percent compared to 2010. can be seen. However, with an increase of 0.5% to 74.8% in the field of employment, it can be noted that it is now of great importance in estimating the employment of the population. In the rest of the economic sectors, in particular, construction, export and import can be seen to grow by 19.1%, 15.8% and 13.6% in 2022, respectively, compared to 2010.

From the results of the analysis, it can be noted that the investment environment in Uzbekistan is of particular interest for the further development of small business and private entrepreneurship. In order to ensure investment attractiveness of small business entities, it is necessary to list the following features:

- giving priority to the state support system and development mechanisms for the development of small enterprises;

- to create special opportunities for the activities of large medium and small enterprises occupying market sectors based on their position;

- for each region, based on their geographical location, to identify small business entities and offer them suitable types of activities. The aim of these is to direct the subjects of small business activities to attract investments in certain directions.

It should be emphasized that in the formation of small business activities, it is necessary to take into account the self-sufficiency of each region with investments based on its internal capabilities. The use of these opportunities in small businesses can be very effective and has several advantages in terms of engagement efficiency.

Thus, it is necessary to increase the number of favorable opportunities for the formation of investment resources and to increase the efficiency of the use of existing resources. A small business has the ability to use any non-large investments efficiently, to operate more efficiently and to use investments efficiently than large firms.

It is necessary to provide information about the conditions and privileges created for the development of small business in our country. It is necessary to show the population the experiences of countries that have achieved the welfare of the population through the development of small businesses. The development of this sector is necessary to ensure the well-being of every citizen to develop or start his own business. It is necessary to improve the organizational and economic mechanisms of the development of small business entities in the country, to develop a system of new mechanisms by determining the influence of several factors, and to put them into practice.

Through the development of this sector, people will have the opportunity to improve their living conditions and support personal initiative. The development of small business entities is a complex process, there are many factors that affect the development of the sector, therefore it is necessary to develop and improve the organizational and economic mechanisms of the sector.

Organizational and economic mechanisms for the development of small business entities in the Republic of Uzbekistan have a multifaceted and complex structure. At the same time, due to deep structural changes in the world economy and globalization in the 21st century, the small business sector of the Republic of Uzbekistan underwent serious structural changes.

In our opinion, it is necessary to pay attention to the improvement of the organizational and economic mechanisms of small business entities:

- first, it is necessary to identify the existing problems in the organizational and economic mechanisms of small business entities and to systematize them;

- secondly, to look at the existing problems in this field as a single complex, to follow the "top-down" principles of problem solving;

- thirdly, by applying digital technologies to the organizational and economic mechanisms of the sector, to improve them, to ensure the coordination of the activities of digital infrastructures;

- fourthly, at the same time, it consists in applying uniform principles in the state support of all areas of development of small entities.

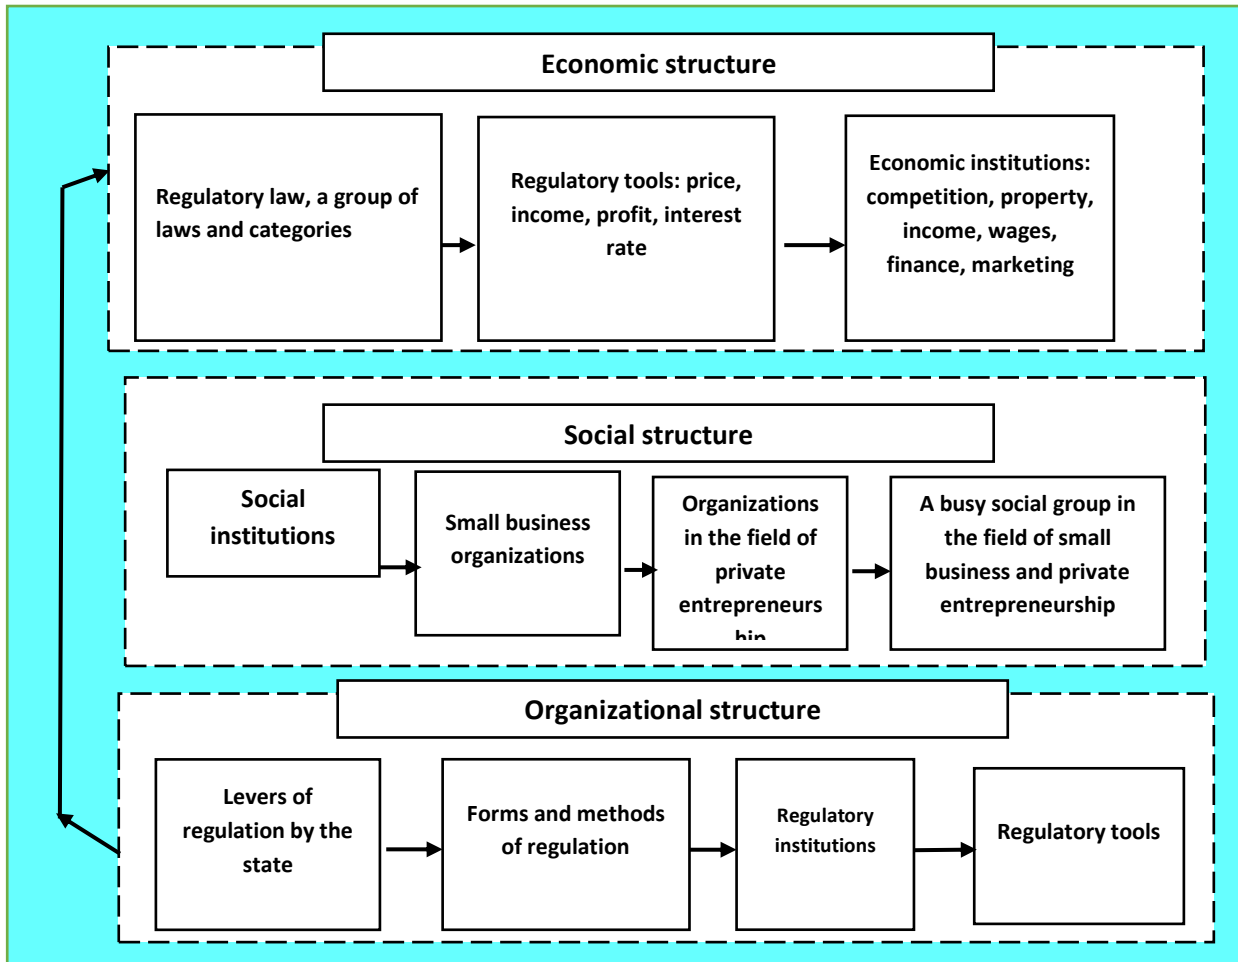

Figure 1. Systematic mechanism of small business development ¹

In Figure 1, the systematized mechanism of the development of small business entities, the main focus of which is divided into economic structures, social structures, organizational structures, and they are presented as a whole system. As a result of the rapid development of this systematized mechanism, the process of deep structural economic reforms in the small business sector begins to accelerate. The systematic mechanism serves to create a favorable economic environment in the field

¹ Developed by the author

of small business, to strengthen the socio-economic relations between small business entities and the state.

In our opinion, this systematized mechanism serves the formation of a sustainably developing small business and private entrepreneurship shell through modernization of structural elements, methods and tools that serve the effective development of small business entities or innovative updates. At the same time, it is necessary to reconsider the possibilities of improving the organizational and economic mechanisms that serve the development of small business and private entrepreneurship.

The systematized mechanism that serves the rapid development of small business entities given above, in turn, provides an opportunity for holistic, innovative development of small business entities in the country. The economic structure block, the social structure block, and the organizational structure blocks located in this mechanism, in turn, show that a three-stage innovation mechanism has been developed.

In conclusion, it is important to expand the activities of small business and private entrepreneurship in the country's economy, to offer new directions, to widely attract new know-how to small business sectors, to create new jobs and solve the problem of unemployment by using the achievements of the fourth industrial revolution in the development of the sector. plays a role.
