Abstract. Teaching and learning foreign languages are complex and long-lasting process. Interaction between teacher and students, process of the lesson and having comprehension or learning and teaching consciously depend on teacher's competence. To show all competence and ability during the lesson teachers need innovative technologies. This article describes about using modern innovative technologies during the lesson.

Keywords: *pedagogical technology, innovative technology, interactive method.*

As far as innovative technologies are concerned, they help to teachers to teach pupils perfectly and bring their attention to the subject which they teach. For this reason, teachers should use innovative technologies during their lessons. Nowadays, it is absolute way of teaching and bringing up new generation of educated people. Generally speaking, the 21st century is the age of technology. As a consequence of it, during the classes teachers in educational institutions try to use some modern technologies such as interactive methods which help pupils to increase their knowledge. Following this, some masters of their profession namely subject specialists have discovered unprecedented discoveries in their subject. From day to day, there is something new that is amazing. In my opinion every teacher should use new innovative technologies to make his or her class interesting, having a new approach to the lesson and always works on herself or himself, in as much as the role of innovative technology during the lesson is important thing. If the teacher teaches with new technologies it will be useful for pupils and they may be interested in this subject more. In the meantime, these innovations are becoming an essential part of educational life. In addition to it, using of the various gadgets and devices are common forms of innovative technologies. Today, useful usage of them is one of the most pressing topics. The lessons taught in modern technology are designed to help students to find out what they are learning, independently analyze and even make conclusions. In this process, the teacher creates conditions for the development, formation, education and upbringing of the individual and the team, as well as serves as a guide. Innovative processes that take place in the present day need decision-makers, independent and free-thinking individuals who are capable of mastering new knowledge and evaluating their own knowledge to address the challenges facing the education system. Therefore, modern teaching methods - interactive methods and innovative technologies are extremely important in educational process of educational institutions. Knowledge of pedagogical technology and its use in education ensures that trainees are educated and trained.

We are dwelling in a world which technology has reduced to a global village and the breakthrough in technology is underpinning pedagogical submissions. It may become imperative therefore to have a rethinking on how to ameliorate the constraints of second language users through the applications of modern technologies. The interactions between new technology and pedagogical submissions have been found to an extent to be addressing the heterogeneous needs of second language learners and any global discovery which aims at minimizing learners' constraints is a welcome development in a rapidly changing world of technology.

Here are some approaches in teaching process foreign languages and usage of them during the lesson. They are helpful during the lesson especially, for the teacher to teach effectively.

1. Remote Access to Language Education

Technology gives the ability to reach audiences all over the world. It allows teachers to be hired locally and learners can access courses that are taught by native language speakers to ensure immersion. Technology has also opened the doors for endless and limitless resources to be accessible regardless of the learner's location, language fluency or economic status.

2. Blended Language Learning Courses

Blended learning means combining online and face-to-face learning. In this set up, the learner completes online courses and the teacher supplements these with classroom teaching that is more focused on actual needs of learners rather than just focusing on the rules that can already be discussed in the online course.

3. Interactive and Collaborative Learning

According to Dexway, the best way to learn something is through an interactive learning environment created by technological tools and resources. The same is true for language learning, the application of the language has to be present and it for the learning experience to be better, make it more interactive and engaging. Tools that promote collaboration are also a great way to learn the language and develop collaborative skills as well.

4. Real World Problem Solving Made Possible

Language learning apps are regularly updated and even feature current events and news as a way to teach the new language. This allows learners to learn in the real world with true-to-life scenarios amidst a virtual learning environment.

5. The best complementary tool for teachers in the classroom

Traditional education is not so effective anymore. Teachers need to motivate their learners more than ever when presenting something in the learning environment. Technology helps the teacher complement traditional methods and enhance the learning experience.

6. Ease in managing and monitoring learner progress

Managing courses, keeping track of learners progress and other administrative tasks is now easier with the birth of online educational platforms that provide numerous functionalities tailored to educational centers' needs.

Languages are not fixed but constantly changing, so is the media; television, radio and newspapers which are an extraordinarily rich source of language in use. In order to expose foreign language learners to the target language the use of technology need to be taken in the classroom as much as possible. For that reason, a great tendency towards the use of technology and its integration into the curriculum developed by foreign language teachers has gained a great importance. Particularly the use of video has received increasing attention in recent studies on technology integration into teacher education curricula. Summing up, one of the favorable features of modular technology training is an activity of a student at school. One feature of this technology is that, in all stages of education in developing cognitive abilities of a student. Developing spoken and written language can offer students to do creative work. During the development of vocabulary, grammar, phonetic skills of a foreign language we can form activities of students in learning, the ability to work independently, the skills to draw conclusions. This is a new technology of today's successful research.
