**Abstract:** In the conditions of market relations, the essence and purpose of economic analysis has changed fundamentally. The financial and management analysis will be conducted in view of the purpose and benefit of the enterprise, its development and effective use of its resources. In this regard, there is a need to analyze the activities of enterprises in the market economy.

**Keywords:** modern machines, careful analysis, efficiency indicators, Product production.

**Introduction**

Regular expansion of the main funds, introduction of modern machines and equipment, strengthening of the material and technical base, development of production are the laws. Improving the use of the company's material and technical base leads to increased production and sales, increased profits and profitability. This requires a careful analysis of the state of the main assets, their availability and efficiency of their use. Before starting the analysis, it is necessary to learn which indicators should be calculated and which ones should be used in the study of this or that issue, as well as the methodology of their determination.

Currently, the need to analyze the main funds is to determine their condition, their supply, and the level of efficiency of use.

Necessary to make a preliminary analysis of the existence of the main assets in the enterprise, their condition, availability, and the effectiveness of the main funds. In this case, it is necessary to determine the state of the main funds available in the enterprise, the initial value of the main means, the amount of accumulated depreciation during their use and their residual amount.

Also total assets inside intangible the weight of the assets can be determined will be During the analysis above telling passed indicators year in the beginning and year at the end indicators absolute between and relative differences can be identified will be

Deepening of analytical work and his the results make it more efficient for in enterprises main from funds where level being used is studied . In the enterprise main of means return and main funds capacity analysis to do works done is increased .

In the enterprise is available has been main of funds efficiency factorial analysis is also appropriate. Mainly in this main of funds efficiency effect doer factors impact is assessed. Main of funds efficiency which factors positive and which factors negative effect it is determined that

Main of funds product learning in the production of products based on them efficiency indicators are evaluated . Main of funds efficiency indicators Product production volume based on factor analysis or tools

the effect increase of internal capabilities existence is studied and analysis at the end in the enterprise main from funds to use and their efficiency increase about important economic directions is determined . of the enterprise main their funds \_ state , action and economic diagnosis of the effect is given

Main funds analysis of doing the importance of doing it increase as a result in the enterprise main from funds fruitful to use and benefit that the indicators are high provides .

Modernization of the economy conditions economy host of subjects main provided with funds in learning most of the financial analysis main duties are the following:

- economy of subjects main enough with funds level assessment of the state of security;
- basic of funds composition , structure and evaluating dynamic changes ;
- of the enterprise main availability of funds situation improve according to is available identifying opportunities and evaluate them ;
- main to the technical condition of funds price to give
- main of funds movement indicators learning and evaluate them ;
- basic from funds efficient usage to evaluate the levels ;
- employees main armed with funds to evaluate the levels ;

### Main part

Liberalization of the economy means, first of all, increasing the responsibility and accountability of those working in this field. This responsibility is a heavy responsibility. Now every employee is responsible to his team, owner, people and state.

Now, each economic entity provides its own activities with appropriate funds, raw materials, labor force, advanced equipment - technology, etc. They sell their goods (work, service) themselves. They provide all their activities with appropriate material and financial resources.

For this, a lot of work has been done and is being done in our country. Together with the normative basis of economic freedom, a spiritual basis was created. It can be said that our people are mentally prepared for such a situation. However, for the full implementation of economic freedom, there are still complications in the mood of the people, even among some of our leaders. Despite the fact that all our laws and other regulatory documents are aimed at introducing a free economy, some of them do not work in real life. Because it is difficult for people to develop enough skills for economic freedom.

In the conditions of market relations, it is important to study their performance indicators, as well as to know whether economic entities are adequately provided with fixed assets. Because, even if the basic funds are sufficiently provided, but they are not used effectively, it will not be correct. In this regard, the study of the effectiveness of the main funds and the identification of opportunities to increase it will ensure the positive financial results of economic entities.

Use of fixed assets and assessment of their effectiveness is one of the necessary conditions of financial analysis.

Main of funds efficiency indicators those in the q house includes :

- main of funds fund return \_
- main of funds fund capacity ;
- car and return of equipment ;
- car and equipment capacity.

Main funds efficiency expressive indicators to find for q in the house from formulas we use :

The meaning of the fund return of the main funds means how many soums of product are produced at the expense of one soum of the main fund. An increase in this indicator is positive, and a decrease is negative.

### Conclusion

Work what 's up from q forces for use study \_ those in the q house characterization can :

- enterprise technical and economic indicators of production capacity system analysis;
- technical economic indicators and use of production facilities q i or si analysis;
- use of production facilities enterprise expenses impact analysis;
- use of production facilities enterprise to production efficiency and activity effectiveness impact analysis.

In the use of production facilities enterprise by 2- b form " Enterprise social economic indicators system is important attention is given In the analysis main of funds efficiency indicators and to him effect doer factors two content on this is studied .

- main of funds efficiency and his to change effect doer factor analysis.
- main funds and of them efficient use indicators the product of size to change impact analysis.
