

INFORMATIONAL AND ORGANIZATIONAL AND LEGAL BASIS FOR PROTECTING
YOUNG PEOPLE FROM DESTRUCTIVE IDEAS

Abdumalikov Abdulatif Abidjanovich

Associate Professor of Fergana State University,
Doctor of Philosophy (PhD)

Kadyrov is the son of Shokhrukhbek Musajon

Teacher of Fergana State University

Abstract: *In this article, information in the world is of great importance in inter-national and inter-state relations.*

Key words: *violence, terrorism , student, internet, press.*

5 of 2018 of the Cabinet of Ministers of the Republic of Uzbekistan The decision No. 707 of September "On measures to further improve information security on the World Wide Web" prohibits the following:

- Calling for forceful changes to the existing constitutional system and territorial integrity of the Republic of Uzbekistan;
- promoting war, violence and terrorism, as well as religious extremism, separatism and fundamentalism;
- disclosure of information that is a state secret or other secret protected by law;
- dissemination of information inciting national, racial, ethnic or religious enmity, as well as harming the honor and dignity of citizens or business reputation, allowing interference in their private life;
- promotion of narcotic drugs, psychotropic substances and precursors;
- cases such as promoting pornography.

In the globalizing world, information is of great importance in inter-national and inter-state relations. That is, it can appear as both a positive and a negative force in the life of the world community. In this sense, countries with great opportunities in the technical and technological sphere will have favorable conditions. Because of this advantage, they can and are promoting values, viewpoints, ideas, and opinions that are in line with their personal interests. Accordingly, anti-globalization movements are emerging in many countries, which refuse to create a single global harmonized information space. At this point, it is worth noting that the anti-globalization movement itself is increasingly becoming a global movement [1,2,3,4,5,6,7,8,9,10,11,12,13].

As the first President of the Republic of Uzbekistan, I.A. Karimov, said: "Our people are open-minded, simple and trusting, they trust what is printed in the press, what is said on television and radio. The information centers that are working against us from the outside are also trying to take advantage of this"

As a result of the rapid development of information and communication technologies, while the processes of globalization are taking place among different nations and peoples of the world, the whole of humanity, including our nation, lives on the basis of various ideological threats that can negatively affect the spirituality of our people [14,15,16,17,18,19,20,21,22,23,24].

There is a great meaning behind every opinion that is said about the extent to which the Internet affects the minds of students who are always interested in news and various information. Some vandals, who are well aware of students' interest in the Internet , use it very skillfully and are escalating the "information attack". "At the end of the 20th century and the beginning of the 21st century, the globalization processes taking place at the world level at the present time created

unprecedented opportunities for the development of all mankind, all peoples and nations of the earth, especially for the young generation coming into life. First of all, today we all witness that the advanced achievements of science and technology, modern information and communication technologies, in particular, the Internet system, open the borders between different countries and regions, and make a great contribution to the development of mutual cooperation and integration, said Islam, the first President of the Republic of Uzbekistan. Karimov. But it cannot be ignored that "such achievements, which are a high and bright manifestation of human thinking, are used as an ideological weapon in the implementation of malicious intentions of some political forces with great power and financial opportunities. Today, it is becoming extremely important to understand the true essence of such attempts to derail the consciousness and spiritual world of people, first of all, the youth, their long-lasting, negative consequences, and prevention of such dangers [25,26,27,28,29,30,31,32,33,34,35,36,37]."

At this point, President Sh. Mirziyoyev said, "Today, I don't sleep at night, thinking that young people are wasting their lives by falling for fake deceptions. After all, only yesterday these young people were our neighbors, our neighbors, our sons, our daughters or nieces! When did they go astray, when did they go astray? Why are we oblivious? When and where did we make a mistake? When did our children fall into the hands of strangers? What the hell happened, they became enemies of their parents and their country?" - calls us all to think deeply.

As the information attack is primarily aimed at young people, it is necessary to sharply eliminate the factors that form negative political views of this attack from a pedagogical and psychological point of view [38,39,40,41,42,43,44,45,46,47,48, 49,50,51,52,53,54,55,56,57,58,59,60,61].

It requires knowing the nature of the motives of political processes and the political education of a person, the formation and development of immunity against information attacks, and active influence on them. That is why our country is paying great attention to directing the political and social activity of young people, forming their political, legal and ideological consciousness.

An information attack is a beneficial information effect on the mind of a person and society, aimed at changing its behavior or stabilizing it. The sources of information attacks are diverse. Mass media, the Internet, non-governmental non-profit organizations, public organizations, foundations, ordinary books, films, sculptures, paintings, etc., can also appear as their subjects. Information attack object and this is it an individual or social group, state. Today modern in the world society of the fields improvement of people's intellectual level increase information attack mechanisms improvement too demand is enough Because this certain society over rule of installation comfortable and efficient method that is considered. Own in turn information safety issue becoming relevant is going on, political, social institutions by of citizens spiritual the world to strengthen attention to strengthen reason is happening Information attack appearances being diverse _ therefore, their each one learning and potential analysis reach and meanwhile _ to them against immunity formation it is necessary [62,63,64,65,67,68,69,70,71,72,73, 74,75,76,77,78,79,80,81,82,83,84, 85,86,87,88,89,90,91,92,93,94,95].

This kind of threats of a person social mind wrong formation and thus _ to himself have didn't happen the crowd content to find looks _ Information ta hd ids information attack as too interpretation will be done and person himself wanted in the style of forms and problems to the vortex throws _ As a result of citizens social consciousness poisoned in society social illness to the body will come.
